Hollow punches, often known as joint-cutters or wad punches, have many varied uses, and can be used for cutting out gaskets and sealing rings in foam, cardboard, leather, rubber, fibre, plastic and lead.

Boehm hollow punches not only offer a quality product, but there is also the added bonus of being able to use cutters in pairs.

The hollow punch sets can be paired and inter-changed very quickly and easily by using the patented lock in chuck system.

# Individual cutters.

Sizes available from 3 - 60mm diameter

3145100 - 3146080

Boehm cutter uses are varied, and can be used for cutting out gaskets and sealing rings in foam, cardboard, leather, rubber, fibre, plastic and lead.

Not only is the quality of these punches unsurpassable, but there is also the added bonus of being able to use pairs of punches to cut washers or sealing rings, etc. in foam, cardboard, leather, rubber, fibre, plastic or lead.

Each set includes a holder and a range of punches which fit to the holder either singly for discs or in pairs for washers. All supplied in a case.

Boehm punches can be used individually or in conjunction with another punch at the same time. By putting two cutters together you can produce washers in one go. For example you could have cutters 12-20mm inside and 22-30mm outside at the same time.

Centering Pin Retractable  
3146265

To produce larger diameter washers, it would be recommended that the spring loaded centre point be used; it is useful with the bigger punches, to help remove the centre.

Centre Pivot Pin Fixed  
3146260

For large diameter gaskets the compass bar and cutting tool is recommended. The unit uses a clever system, where by the screw-in point also locks the compass bar in position. The maximum diameter of the trammel bar is 330mm
