UltraBit Screwdriver Range

Sutton Tools UltraBits, with impact torsion neck, designed to withstand high torque impact applications.

Features

- Shock Absorber Zone – Impact torsion neck, designed to withstand high torque screwing, lasting 12x longer than standard bits.
- Anti-Breakage – Reinforced joints for a stronger link avoiding breakages.
- Ring Reinforcement – Reinforced screw head ring for longer impact resistance.

Impact

Impact Bits – specifically developed for use with the high-torque output of an impact driver. Look out for the “Impact” logo on the packaging.

Magnetic

All bits are magnetic eliminating frustration and increasing productivity when working at awkward angles or in tight spaces.

Torsion

Shock Absorber Zone – Impact torsion neck, designed to withstand high torque screwing.

Precision Fit

Precise Fit – Avoids slipping and stripping screw heads.

Available in:

Phillips Square Torx Hex

SUPABIT
EXTREME IMPACT

Torsion Bits

Specifically suited to withstand high torque applications. The elastic property of these bits deliver professional performance that stands up to rigorous use.

Power Bit
1/4" hex for use in impact drivers and quick change adapters

ACR Tip
Anti cam-out rib system reduces stripping and damage to the screw

Torsion Neck
Designed to disperse torsional stress and reduce wear of the screwdriver bit

Insert Bit
1/4" hex for use in bit holders and hand drivers

Application

Screwdriver Bits Supabit, Hex

suttontools

SUPABIT
EXTREME IMPACT

3X
TORQUE

This system is very popular in machine tools and driving deck screws. The vertically sloping side walls of a hex recess screw head prevent the cam-out recess effect.

Power Bit
1/4" hex for use in impact drivers and quick change adapters

Insert Bit
1/4" hex for use in bit holders and hand drivers

Recess Design
Provides better mating with the driver, greater driving surface and minimal metal "fall away"

Application (Hex)

- DIY
- Trade
- Automotive
- Furniture
- Carpentry
- General Contracting
- Metalworking
- Machine Shop
- MRO

Screwdriver Bits Quickbits® - Smart Setter

Smart Setter features adjustable screw depth designed for controlled and uniform screwing on decks, drywall and general fastening without marking the surface or damaging the screw recess. Fits most types of screw bits with 1/4" hex shank.

1/4" Hex Shank
Suits impact drivers and quick change adaptors

Stop Collar
With easy-spin bearing prevents tool from marking the workpiece

Depth Activated Clutch
Stops screw bit drive once desired depth is reached and prevents screw head damage

Adjustable Depth Stop
For accurate control of screw depth

Extra-Wide Gullets
Allow chips to clear without jamming

Screwdriver Bits Technical Information

						
Flat	Oval	Round	Button	Truss	Pan	Socket
Installs flush with metal surfaces or countersinks with softer materials for clean appearance.	Used where countersink installation is desired. Rounded head offers deep recess and is visible just above the surface.	Widely used for general purposes. Features a high crown with a deep recess and smaller diameter head than our Truss or Pan Head designs.	Used for general purposes with a lower crown and shallower recess than our Round Head design.	Low profile offers added security against vice-grips removal. Large diameter head for increased fastening strength.	Features a low profile, large diameter head with a high-edged crown for increased strength.	Features a cylindrical head profile allowing for a deeper recess. This style of head is common amongst TORX® and Hex drive systems.

Types of Screw Threads

These types have a locating point with either an A or B thread forming screw thread.

Ideal for applications where no pilot holes are required due to a type AB thread with a self drilling point.

Available in both imperial or metric threads, these screws offer a straight sheared point.

Frequently Asked Questions

Are your screwdriver bits milled or forged?

Our bits are forged for many reasons such as life and performance. This manufacturing process enables our screwdriver bits to have superior performance characteristics against milled equivalents.

What is the difference between an insert bit and a power bit?

The insert bits are commonly used with a magnetic bit holder in a power tool. This combination is economical, provides flexibility and allows a fastener to be magnetically held by the bit. The power bits are placed directly into the drill chuck.

What is ISO-Temp™?

ISO-TEMP™ has been developed to combine both the low wear advantages of extra hard bits and the high elasticity of medium hard bits. This means that ISO-TEMP™ bits ideally suit screw driving in hard materials where high torque peaks need to be counteracted.

Where do I use reduced diameter bits?

In applications for driving screws below the surface of a drywall.

Painted, coated and corroded fasteners provide excessive cam-out, what should I do?

ACR® bits, with their extra grip, are a good solution. ACR® bits are available in both insert and power drives.

How do I identify between Phillips® and Pozidriv® bits?

The shallow 'cross' indentations in the screw head identify a Pozidriv® fastener. The Pozidriv® bit and recess design provides more surface contact between the bit and the screw head than a standard Phillips®. Therefore, the Pozidriv® allows you to apply more torque, reduce the possibility of cam-out. Another way to distinguish the difference is that a Pozidriv® bit can drive a Phillips® screw (but not recommended), whilst a Phillips® bit will struggle to drive a Pozidriv® screw.

Registered Trademarks:

L-Wrenches Ball End

Ball End inserts into a screw at a 25° angle.
 Ball End saves time by quickly funnelling tool into screw.
 25° angle allows natural hand and wrist movement.
 Superior Ball End strength and working angle.
 Works in hard to reach places.

Ball End Tips
 25° working angle
 for quick funnelling
 into screw

Up to 20% stronger, with
 more torque and higher wear
 resistance than standard steel

Environmentally
 safe finish for
 better corrosion
 resistance and grip

Chamfered Hex Tip
 For faster insertion and
 full tool engagement in
 the screw head

BD14199

L-Wrenches ColorGuard™ Ball End

Color-coded tools can be distinguished at a glance.
Superior rust protection finish.
Sizes are stamped on the tool.
Ball End inserts into screw at a 25° angle.

BD69499

BD69637

Ball End Tips
25° working angle
for quick funnelling
into screw

Up to 20% stronger, with
more torque and higher wear
resistance than standard steel

Color-coded and superior
rust protection finish

Chamfered Hex Tip
For faster insertion and
full tool engagement in
the screw head

Discount Group: Z1501

GorillaGrip® Fold Up Sets

Patented handle design makes every job faster and easier. Durable GorillaGrip® handle is stronger than steel handles. Tool user can adjust tool tension.

Up to 20% stronger, with more torque and higher wear resistance than standard steel

Moulded in 90° stop converts the tool into a time saving speed wrench. Blades open up to 270° from handle. Moulded on stops then blades securely in place

Socket Bits Hex End

Bits fit any standard six point socket.
 Bits are suitable for use with impact sockets.
 Chamfered tool tips eliminate burrs and help tools seat in screw head.
 Sharp corners transfer more torque to the screw and reduce stripping.
 Precision machined for ease of use and superior fit.

Hex End Tips
 Precision machined for superior fit

Up to 20% stronger, with more torque and higher wear resistance than standard steel

Environmentally safe finish for better corrosion resistance and grip

Discount Group: Z1501
